

ChecklistLab3

October 2, 2025

1 Exercise 1

- Implementation of mutators (5 points);
- discussion on strength/weakness of your mutators (3 points);
- demonstration of the proposed mutators (2 points).

2 Exercise 2

- Working implementation (5 points);
- discuss the effect of using different properties (2 points);
- discuss the effect of using different mutators (2 points);
- discuss the meaning of your results (1 point).

3 Exercise 3

- Working implementation of the minimal property subset function (5 points);
- test your function on a set of at least 3 properties (with bonus points if you consider more properties) (3 points);
- discuss aspects like redundancy of properties, non-detectable mutants, selection strategies (2 points).

4 Exercise 4

- Clean and correct implementation (6 points);
- discuss how you compute strength (2 point);
- report on the existing properties strength (2 points).

5 Exercise 5

- Give an approach, and possibly an implementation, for the proposed problem (7 points);
- test the proposed functions (equivalent properties, subset, disjunct) (2 points);
- check for both equivalence and implication (1 points).

6 Exercise 6

- Working implementation of the required function (8 points);
- show results in a table (1 point);
- configurability of visualization (1 point).
