

Checklist Lab 2

September 24, 2026

1 Exercise 1

- Clean and correct implementation of the random generator from scratch (4 points);
- clean and correct implementation of the QuickCheck generator (4 points);
- discussion on the implementation and comparison (2 points).

2 Exercise 2

- Clean and correct implementation of the required operations (4 points);
- at least 3 properties tested (3 points);
- design choices, test report, with discussion on the test space (2 points);
- tests on two different domains (1 point).

3 Exercise 3

- Clean and correct implementation of `symClos` (8 points);
- brief discussion on your implementation and definition of symmetric closure (2 points).

4 Exercise 4

- Clean and correct implementation of the `isSerial` function (5 points);
- at least 2 properties tested (2 points);
- design choices and test report (remember to answer the proposed questions!) (3 points).

5 Exercise 5

- Clean and correct implementation of `trClos` (8 points);
- brief discussion on your implementation and definition of transitive closure (2 points).

6 Exercise 6

- Testing method, as required (3 points);
- using random tests (2 points);
- test at least 3 properties (3 points);
- test report, and answer to the proposed question (2 points).

7 Exercise 7

- Answer to the question with proof or counterexample (10 points);

8 Exercise 8

- Implementation of the required function (6 points);
- testing using `QuickCheck` (2 points);
- design choices and test report (2 points).
